

HE Upgrade, FDM Implementation

CLIENT STATS

General Company Info

- S&P 600
- 2010 Rev: \$431 billion

Products

- Hyperion Enterprise
- FDM
- Smart View

Application Highlights

- Enterprise upgrade
- Enterprise upgrade
- Conversion of Upstream to FDM
- Multiple server environments and installations
- Citrix-based user access to both Hyperion Enterprise and FDM

Project Overview

The Client had previously deployed Hyperion Enterprise and Upstream WebLink via Citrix and needed to upgrade to versions that were fully supported by Oracle. Additionally, the Client wanted to take advantage of the new functionality in both FDM and Hyperion Enterprise 6.5.

Project Highlights

Finit's solution for the Client includes the following features:

- Finit performed an upgrade of Upstream WebLink v. 7.0.5 to FDM 9.3.1.
- All custom reports were rebuilt in FDM.
- Finit performed an upgrade of Hyperion Enterprise v. 6.4 to version 6.5.
- The Hyperion Enterprise Utility was used for this upgrade, Smart View was installed and External Authentication was turned on.
- The Client had a multi-server environment that includes user interfaces with Citrix.

Benefit

- The Client is now in compliance with fully supported Hyperion products.
- Able to use new functionality present in newer releases of FDM and Hyperion Enterprise.
- Implementation presented an opportunity to formally train the administrators, both of whom had inherited the application from predecessors, resulting in the Client's ability to manage their applications more independently.
